

CLAIMS

Sub A2
5 1. A drink, which is characterized in that water-soluble mineral components are added to water obtained by desalting seawater.

2. The drink as claimed in Claim 1, which is characterized in that said water-soluble mineral components are obtained from seawater.

3. The drink as claimed in Claim 1 or 2, which is characterized in that water-soluble mineral components obtained from seawater are added to water obtained by desalting the same seawater.

10 4. The drink as claimed in any one of Claims 1 to 3, which is characterized in that mineral components obtained from seawater are magnesium and calcium.

5. The drink as claimed in any one of Claims 1 to 4, which is characterized in that the weight ratio of magnesium to calcium (Mg/Ca) is adjusted to 4/1 to 1/3.

15 6. The drink as claimed in Claim 5, for which is characterized in that the weight ratio of magnesium to calcium (Mg/Ca) is adjusted to 3/1.

7. The drink as claimed in any one of Claims 1 to 6, which is characterized in that hardness of water measured by the EDTA method is from 100 to 3,000.

8. The drink as claimed in Claim 7, which is characterized in that hardness of water measured by the EDTA method is from 250 or 1,000.

20 9. The drink as claimed in any one of Claims 1 to 8, which is characterized in that the taste has been adjusted using sugar or sour flavors.

10. The drink as claimed in any one of Claims 1 to 9, which is characterized in that said seawater is surface water.

25 11. The drink as claimed in any one of Claims 1 to 9, which is characterized in that said seawater is deep water.

12. The drinks as claimed in Claim 11, which is characterized in that said seawater is deep water obtained at a depth greater than 100m.

13. The drink as claimed in any one of Claims 11 or 12, which is characterized in that said seawater is deep water obtained at a depth of 200 to 500m.

30 14. A method for producing a drink, which is characterized in that collected
